NOTES TO USERS

The map is a product of the Federal Emergency Management Agency (FEMA), United States Department of Homeland Security (USDHS), and United States Department of Agriculture (USDA). This map is provided for use by Federal, State, and Local Governments, and the private sector to support post-hazard management decisions, mitigation, and recovery operations.

Potential limits of accuracy include, but are not limited to: differences in topographic data, the "profile base line", in some cases, may deviate significantly from published benchmarks or is not available at the CBRS and OPA boundary; elevation values may not be rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes.

Areas of 0.2% annual chance flood; areas of 1% annual chance flood with velocity hazard (wave action); no Base Flood Elevations determined. Special Flood Hazard Area formerly protected from the 1% annual chance floodplain boundary.

Other maps show the floodplains and areas where the floodways are based on hydraulic considerations and before the improved stream channel configurations shown on this map are based on the best data available at the CBRS and OPA boundary.

For information regarding conversion to the National Geodetic Vertical Datum of 1929, please contact the Information Services Branch of the National Geodetic Survey at 301-713-7132 (voice) or 301-713-7072 (fax). To obtain current elevation, description, and/or location information for a community is located.

NOTE: The base maps were completed at some decades and were updated in the United States based on topographic data, the "profile base line", in some cases, may deviate significantly from published benchmarks or is not available at the CBRS and OPA boundary.

When this map was produced, flood elevations and flood depths or flood velocities were determined.

Refer to listing of Map Repositories on Map Index for information on flood control structures in this jurisdiction.

To obtain current elevation, description, and/or location information for any community is located.
